

O2 Hurricane canless air system hits market

Healthy, green alternative to canned air getting rave reviews

A new product is on the market that offers, literally, a blast of fresh air for cleaning electronics and other dusty items. Called the O2 Hurricane, the canless air system is a cordless, rechargeable device that is safe for people in the workplace and the environment.

"It just uses the air we breathe," said company CEO John Scherer. "The O2 Hurricane electronically compresses the air and blasts it onto the surface or object being dusted. No harmful chemicals are used. The big difference between so-called 'canned air' is it has a warning label. The O2 Hurricane doesn't need one because it uses only air."

Scherer said canned air is really a dangerous and potentially explosive mix of various gases. According to the Environmental Protection Agency, canned air is classified as hazardous waste. Other dangers exist from inhaling fumes from the gasses inside.

The O2 Hurricane, which is almost 8 inches tall and weighs just 14 ounces, is portable and rechargeable. The unit can be recharged 500 times. Its continuous run

gathers dust in the workplace or at home.

This product is already getting positive reviews. Al Lewis of Dow Jones Newswires described O2 Hurricane as "a blast."

"Good Morning Arizona" called the O2 Hurricane "a safe, eco-friendly alternative to canned air."

A prototype of O2 Hurricane was made in 2011 and Scherer started selling the product in March 2012. So far all sales are conducted online, but retailers are expressing interest.

"It's been received with open arms and that's a phenomenal thing," he said. "People want a replacement for canned air."

Scherer started the company in 2011 and then redesigned, reconfigured and renamed the device. The O2 Hurricane is manufactured in the United States at a plant in Tucson, Arizona.

The O2 Hurricane sells for \$99.95 MSRP (currently on sale for \$79.95) plus shipping

and handling, which Scherer said is economical for anyone who would otherwise buy large quantities of canned air.

Each O2 Hurricane canless air system comes with a 110-volt wall charger. Included are straw-like attachments to reach the tightest and smallest of corners to safely clean dust away.

Lewis concluded in his column, "In any case, the O2 Hurricane seems like an easy sell. It's green, it cuts costs and it's made in America."
